- Professional Technicians.
- Up-Front Proposals.
- Shoe Covers for Floor Protection.
- Detailed Clean-up When We're Finished.

What If A Storm Knocks Out The Power?

If you have lived in Kansas for any amount of time, you know that there are typically two major storm seasons each year. It is during these times that due to tornados, ice storms, snowfall, and other natural calamities that there exists a possibility for disruption of power to your home. Power outages can effect heating, cooling, security systems, refrigeration, lights, cooking and bathing, and depending on the severity, the outages can last for days, sometimes even weeks.

That is why, here at Greenwave Electric, we feel it is important to protect your home from such an occurrence by investing in a Cummins Onan Standby Generator. Listed here are just some of the benefits of choosing a Cummins:

- **Quietest generator you can get:** Testing according to an independent third-party testing company.
- **In-Home digital display:** Let's you program your generator, and is as easy to use as a thermostat.
- **Remote Monitoring:** Provides online two-way communication with your generator. This gives you status updates, allows you to start and stop the unit and can send alerts to technicians with regards to needed service.
- **Email Notification:** Sends emails to you and your service technician about power outages, routine maintenance, service needs, and more.

Is Your Home Electrical System Ready For The Holidays?

Family gatherings, festive lights, decorations, big home cooked meals and plenty of fresh baked deserts...add these things together and you get the Holiday Season that will soon be upon us. What you might not realize though, is that this same combination in your home can also mean a possible overload to your electrical system, which causes an increased risk of electrical fires.

Our Greenwave Electric family wants to help ensure the safety of you, your family and all of your loved ones during this holiday season by providing:

Free electrical inspection of your home for a **limited time only**. November 10th through November 14, just give us a call at Greenwave Electric 785-783-0218, or go online to greenwaveelectric.com and schedule your free electrical inspection (normal value of this service is \$350.00). This offer is subject to technician availability.

Let us help you to have a safe and wonderful holiday season this year, with peace of mind. Remember the good times, not “that one time”.

Practice Safety When Using Electric Blankets

Everyone knows that you can stay toasty warm when adding an electric blanket to the bed in winter, but are you aware of how to use one safely? Read these tips to know for sure:

- Always check for worn cords or any other damage before plugging blanket in.
- Never tuck an electric blanket under a mattress or place anything on top of one, such as a quilt or bedspread, as it could cause overheating.
- Never fold an electric blanket while in use, as it could result in the heating element to burn out.
- Always follow the manufacturer's instructions when using an electric blanket. Most advise against use on waterbeds and sofas.
- Never dry clean an electric blanket, as the chemicals will damage the heating insulation and increase the risk of fire.
